Inefficient teachers overlook the potential power of the opening minutes of class. Often, if students are quiet enough and if there are many pressing demands on a teacher's time at that moment, more than ten minutes can disappear before class starts. It's no wonder that students are late for class; they have little reason to be on time. You can use the first ten minutes to get your class off to a great start, or you can choose to waste this time. The first minutes _____. If you are prepared for class and have taught your students an opening routine, they can use this brief time to make mental and emotional transitions from the last class or subject and prepare to focus on learning new material. So, it is a good idea to set up an opening routine that helps your class get off to an effective start.

① are the least important part of a lesson
② should be used for checking homework only
③ set the tone for the rest of the class
④ cause students to be late for school
⑤ make the last class easier to remember

Many atoms in your body are nearly as ① old as the universe itself. When you breathe, for example, only some of the atoms that you inhale are exhaled in your next breath. The remaining atoms are taken into your body to become part of you, and they later leave your body by various means. You don't "own" the atoms that make up your body; you ② own them. We all share from the same atom pool because atoms forever travel around, within, and among us. Atoms ③ cycle from person to person as we breathe and as our sweat is evaporated. We recycle atoms on a grand scale. The origin of the lightest atoms goes back to the origin of the universe, and most ④ heavier atoms are older than the Sun and Earth. There are atoms in your body that have existed since the first moments of time, recycling throughout the universe among ⑤ limitless forms, both nonliving and living. You're the present caretaker of the atoms in your body. There will be many who will follow you.

The act of gardening itself is a fantastic form of physical activity. It involves a range of motions, from digging and planting to watering and harvesting.

(A) Studies have shown that spending time in nature, even in a small garden, can elevate mood, improve cognition, and reduce depression symptoms. Watching your plants grow and do well can also give you a sense of achievement, which raises your self-esteem and overall well-being.

(B) Apart from physical health, gardening is also very good for your mental health. Tending to plants can be incredibly calming and meditative. It allows you to focus on the present moment, reducing stress and anxiety. The repetitive tasks involved in gardening can induce a state of mindfulness, similar to meditation.

(C) These activities help improve strength, flexibility, and endurance. You might not realize it, but small tasks like weeding or turning compost can burn many calories. Gardening is particularly beneficial for those who find traditional exercise challenging. It's a low-impact way to stay active and fit, making it accessible for people of all ages and physical abilities.

*compost: 퇴비

For many centuries, humans have taken advantage of tools that translate and bring into our perception natural phenomena that we can't perceive with our senses. In some cases, this consists of simply amplifying signals that feed into our normal sensory inputs (e.g., telescopes can bring into clear view that which is too far away for our eyes to perceive on their own). Other instruments turn signals that we cannot perceive into ones that we can observe. Some of these expand the reach of our current senses, for example by creating visible images from the ultraviolet spectrum of light or by changing sounds that are outside the range of human hearing into audible signals. Alternatively, some instruments measure properties for which we have no sensory capacity at all and change them into that which we can observe.

> Moreover, several influential physicians have offered historical evidence that animal experimentation has not been as responsible for biomedical discovery as defenders suggest.

Many opponents of animal experimentation argue that not only is modern medicine not the only cause for the decline in mortality, many medical advances that did contribute to human health were not the result of animal experimentation. Defenders of research have claimed that since there is a strong correlation between the practice of animal experimentation and medical advancement, the former caused the latter. (①) Opponents of research reject this inference. (②) After all, we have independent reasons to expect these phenomena to be correlated. (③) Since the law prescribes that all new drugs, prosthetic devices, and surgical techniques be tried on animals before they are used in humans, we will subsequently find that all medical advances are correlated with prior experimentation on animals. (④) Consequently, the correlation between animal experimentation and medical discovery is the result of legal necessity, not evidence that animal experimentation led to medical advances. (⑤) They claim that clinical discoveries played a more substantial role than animal researchers have led us to believe.

Big mammalian herbivore species react to danger from predators or humans in different ways. Some species are nervous and fast, and they are made to run away at once when they sense a threat. Other species are slower, less nervous, seek protection in herds, stand their ground when threatened, and don't run until necessary. Naturally, the nervous species are difficult to keep in captivity. If put into an enclosure, they are likely to panic, and either die of shock or hit themselves repeatedly to death against the fence in their attempts to escape. That's true, for example, of gazelles, which for thousands of years were the most frequently hunted game species in some parts of the Fertile Crescent. There is no mammal species that the first settled peoples of that area had more opportunity to domesticate than gazelles. But no gazelle species has ever been domesticated. Just imagine trying to herd an animal that runs away, blindly hits itself against walls, can leap up to nearly 30 feet, and can run at a speed of 50 miles per hour!

*herbivore: 초식동물 **herd: 무리

For a species born in a time when resources were limited and dangers were great, our natural tendency to share and cooperate is complicated when resources are plenty and outside dangers are few. When we have less, we tend to be more open to sharing what we have. Certain nomadic tribes don't have much, yet **(a)** they are happy to share because it is in their interest to do so. If you happen upon **(b)** them in **(c)** your travels, they will open up their homes and give you their food and hospitality. It's not just because they are nice people; it's because **(d)** their survival depends on sharing, for **(e)** they know that they may be the travelers in need of food and shelter another day. Ironically, as we gain more, our fences grow bigger, our security becomes more advanced to keep people away, and we want to share less. Our desire for more, combined with our reduced physical interaction with the "common folk," starts to create a disconnection or blindness to reality.

*nomadic: 유목의 **hospitality: 환대

8 윗글의 요지로 가장 적절한 것은?

① Nomadic tribes share only with people they already know.
② Travelers should always bring their own food and shelter.
③ Strong security systems help people trust their neighbors.
④ People in modern cities are kinder than nomadic tribes.
⑤ The more people have, the less willing they become to share with others.

Whether we feel happy or sad, content or discontent, is not determined ① merely by each individual successive moment of life experience—a good thing happens and I'm happy, a bad thing happens and I'm sad. **(A)** _____ our experiences affect our mood, we are not blown in a completely new direction by each gust of wind. As humans, we adjust—to new information and events both good and bad—and return to our personal default level of well-being. There will be highs and lows, but over time, like water seeking its own level, we are pulled toward our ② baseline—back up after bad news and back down after good. The euphoria of first love ③ fades, and so does the despair of a break-up. This tendency is best seen with little kids and their toy joy: When they get what they've ④ feared for, they believe they will be happy for the rest of their lives. And for the first few minutes of the rest of their lives, they are. **(B)** _____ then the kids—like adults—⑤ adapt.

*euphoria: (극도의) 행복감

[12~13] 다음 글을 읽고, 물음에 답하시오.

Although you may put off going to sleep in order to squeeze more activities into your day, eventually your need for sleep becomes overwhelming and you are forced to get some sleep. This daily drive for sleep appears to be due, in part, to a compound known as adenosine. This natural chemical builds up in your blood as time awake increases. While you sleep, your body breaks down the adenosine. So this molecule may be the way your body keeps track of lost sleep and brings on sleep when it is needed. An accumulation of adenosine and other factors might explain why, after several nights of less than optimal amounts of sleep, you build up a sleep debt that you must make up by sleeping longer than normal. Because of such built-in molecular feedback, you can't become accustomed to getting less sleep than your body needs. Eventually, a lack of sleep catches up with you.

*compound: 화합물 **accumulation: 축적

12 윗글의 주제로 가장 적절한 것은?

① A build-up of adenosine creates a need for sleep that we cannot ignore.
② Squeezing more activities into the day improves the quality of sleep.
③ Sleeping longer than normal causes adenosine to build up in the blood.
④ People can easily get used to sleeping less than their bodies need.
⑤ Most chemicals in the blood are broken down during the day.

13 밑줄 친 a lack of sleep catches up with you가 윗글에서 의미하는 바로 가장 적절한 것은?

① you will fall asleep faster if you exercise more
② adenosine disappears when you stay awake longer
③ you can train your body to need less sleep
④ the effects of lost sleep will eventually affect you
⑤ sleeping too much makes you feel more tired

[14~15] 다음 글을 읽고, 물음에 답하시오.

One of the things that ① makes uncertainty difficult for members of the public to appreciate is that the significance of uncertainty is relative. Take, for example, the distance between Earth and the sun: 1.49597 x 10^8 km, as ② measuring at one point during the year. This seems relatively precise; after all, ③ using six significant digits means I know the distance to an accuracy of one part in a million or so. However, if the next digit is uncertain, that means the uncertainty in knowing the precise Earth-sun distance ④ is larger than the distance between New York and Chicago! Whether or not the quoted number is "precise" therefore depends on what I'm intending to do with it. If I care only about what minute the sun ⑤ will rise tomorrow, then the number quoted here is fine. If I want to send a satellite to orbit just above the sun, however, then I would need to know distances more accurately.

*significant digit: 유효 숫자

② relative	.....	person
③ fixed	.....	year
④ absolute	.....	distance
⑤ relative	.....	purpose

16 다음 글의 내용과 일치하는 것은?

Richard Heinberg, an American journalist, argues that in building the renewable energy infrastructure to stop global warming, we are actually involved in one of the greatest change projects in human history. In addition to solar panels and wind turbines, we have to build an alternative transport infrastructure, farming procedures and industrial processes. This transformation cannot happen without fossil fuels. For instance, production of concrete structures and steel elements require amounts of energy that is only possible to produce with fossil energy. Production of solar panels requires scarce and expensive minerals which must be excavated, again requiring the use of fossil fuels. Thus, the harder we push towards a renewable energy system, the faster we have to use fossil energy for the construction process. **(가)** 이것은 비용이 많이 들 뿐만 아니라 지구의 배출량을 줄이려는 우리의 노력을 약화시키는 요인이기도 하다. Heinberg remarks that the cost of building this new energy infrastructure is seldom counted in transition proposals, which tend to focus just on energy supply requirements.

*excavate: 발굴하다

① 태양광 패널 생산에는 흔하고 값싼 광물이 쓰인다.
② 콘크리트와 강철 생산은 재생 에너지만으로 충분히 가능하다.
③ Heinberg는 재생 에너지 기반 구축을 인류 역사상 가장 큰 변화 사업 중 하나로 본다.
④ 전환 계획들은 대개 새 기반 시설을 짓는 비용을 꼼꼼히 계산한다.
⑤ 재생 에너지로 전환하는 데 교통 기반 시설은 새로 지을 필요가 없다.

17 다음 빈칸에 들어갈 말로 가장 적절한 것은?

For centuries, humans have dreamed of machines that could become intelligent and make decisions like humans. There have been myths about robots, automatons, and artificial beings since ancient Greece (e.g., the myth of Pandora, who released ills upon the world). Likewise, literature throughout history has dreamed of creating human-like creatures and thinking machines (e.g., Mary Shelley's Frankenstein). In 1950, British mathematician Alan Turing asked whether machines could think and reason like humans and then developed the Turing test to measure a machine's intelligence and whether the machines can think autonomously. A few years later, MIT professor John McCarthy coined "artificial intelligence," replacing the previously used expression "automata studies." Since then, artificial intelligence has become the study and practice of "making intelligent machines" that are _____—endowed by their creators with reasoning and learning.

*automaton: 자동 장치 **endow: 부여하다

① programmed to think like humans
② designed to replace all human workers
③ based on the myth of Pandora
④ used only for measuring intelligence
⑤ unable to reason or learn on their own

18 다음 빈칸에 들어갈 말로 가장 적절한 것은?

The desert tortoise has a simple solution for coping with Death Valley's extreme heat: It avoids it. The slow creature sleeps through the winter and stays in its tunnel for much of the summer, so it does not move for more than 90 percent of its life. In fact, the tortoise usually only surfaces after a good rain. Then, it gets to work. The tortoise stocks up on water by eating plants and digging holes to collect rain. But to stay supplied with water through its extended hibernation, the reptile relies on something else—its highly sophisticated bladder. Unlike most animals, the tortoise's bladder acts as a holding tank, allowing it to reabsorb water back into its body. Incredibly, a desert tortoise can _____. And because its bladder is so important to a tortoise's survival, park rangers often remind visitors not to stop and help the slow-movers across the road. Tortoises become so terrified when people pick them up that they empty their bladders, losing their precious water reserves.

*hibernation: 동면 **bladder: 방광

① survive the winter only by drinking rainwater every day
② go a full year without taking in any freshwater at all
③ store water in holes it digs near the road
④ stay active through the hottest days of summer
⑤ reabsorb water only when people pick it up

[19~20] 다음 글을 읽고, 물음에 답하시오.

Imagine you are pedalling your bicycle on a level road. You stop pedalling: no force is now acting to move you forward. What happens? You gradually slow down. How could you slow down more suddenly, in a shorter distance? ① By putting the brakes on. ② Riding a bicycle regularly is also a great way to stay healthy. ③ Because the brakes change your movement, making you slow down more suddenly, they must be exerting a force on the bicycle and you, as they grip and rub on the wheel-rims. ④ This is the force called friction, which tends to slow down moving things by acting in the direction opposite to movement, that is backwards. ⑤ Even without the brakes on, _____, which also slow you down. One of these is friction in the wheels rubbing on the axles. Another is air resistance, which you can feel, pushing you backwards as you and the bicycle move forwards. If you apply these ideas to things around you, such as a cart, you can find what may be causing friction: mostly the axles rubbing on the body as they turn.

*axle: (바퀴의) 축 **rim: 테두리

19 윗글의 빈칸에 들어갈 말로 가장 적절한 것은?

① there are other friction forces acting on you and your bicycle
② no force acts on you and your bicycle at all
③ the wheels keep pushing you forward faster
④ air resistance helps you move forward
⑤ you can stop pedalling without slowing down

Linear editing was like composing a paper on a typewriter.

Today, all editing systems are nonlinear computer-based systems that let editors reach any video shot or scene directly, without fast forwarding or fast reversing to find it. (①) Nonlinear systems can create a range of special effects, such as slow motion, wipes and dissolves. (②) Another highlight of a digital nonlinear system is its random access process that makes it easy for an editor to find desired shots or scenes without having to spend time fast forwarding or rewinding videotape. (③) With nonlinear editing, shots or scenes can be easily added or removed anywhere in the program, and the computer adjusts the program length automatically. (④) If a mistake was made or new information needed to be added the whole piece had to be retyped. (⑤) Nonlinear editing, on the other hand, is like using a word processing program. If a mistake is made, it is easily deleted and fixed with a few keystrokes, and new information can be added easily.

*linear: 선형의

22 주어진 글 다음에 이어질 글의 순서로 가장 적절한 것은?

Vision **(a)** <u>is influenced</u> by our preconceptions about reality. In viewing a scene, we establish unconscious hierarchies that reflect our functional relationship to objects and our momentary priorities.

(A) For example, when visualizing a hammer in our mind's eye, we tend to "see" it in profile or at some other "ready for use" angle. One would probably not visualize a hammer as seen from the top so that the handle is hidden by the hammer's head. The functional relationship we have with objects **(b)** <u>create</u> visual expectations that interfere with our ability to see "like a camera."

(B) When we look at them carefully, photographs are often surprising because they don't **(d)** <u>interprets</u> confusing details but simply serve them up to us with a mechanical indifference. And because of their flatness, photographs often contain areas that **(e)** <u>appear</u> as unrecognizable colors and shapes.

(C) The camera, like the human eye, **(c)** <u>sees</u> only shapes and colors. It documents the world impartially through a lens that is similar to the eye.

① (A) - (C) - (B) ② (B) - (A) - (C) ③ (B) - (C) - (A)
④ (C) - (A) - (B) ⑤ (C) - (B) - (A)

23 다음 글의 밑줄 친 부분 중, 어법상 틀린 것은?

"May I help you?" are the worst four words that a retail salesperson can utter because they don't encourage the customer to talk and put them on the defensive. The four words usually draw out a negative response that stops cold a sales transaction. Examples of better questions ① <u>to use</u> when approaching customers are "Is there anything in particular that you are looking for?" and "Are you shopping for a gift?" If a fashion salesperson approached you with "May I help you?" chances are you would feel the salesperson didn't care. This line is a rote approach that is so overused by untrained and uninterested salespeople. In fact, most of us shudder in horror on hearing these words. The very meaning of the question "May I help you?" implies that the customer is in trouble of some sort and needs rescuing. This almost always puts the customer on the defense. "No, thank you" ② <u>is</u> usually the immediate response, even if the customer is actually in need of assistance. The subconscious thought by the customer is often "I'm smart enough to figure out what I want, and I don't need your help!"

If customers feel pressured or cornered, then salespeople won't make any sales. The approach has to promote a comfortable environment that ③ <u>make</u> customers feel there is no rush. Furthermore, if customers just want to look around, they should feel that it is all right ④ <u>to do so</u>. In situations where customers really do want to look around on their own, salespeople should give customers their business cards and keep ⑤ <u>themselves</u> accessible in case customers have questions or concerns.

*shudder: 몸서리치다
